

Seamlessly Access, Organize, and Share Digital Content

The move to digital content isn't easy. We can help.

Curriculum Foundry provides school districts with the tools to find and create high quality custom curriculum, and improve student engagement, all in a budget-friendly way.

Features and Benefits

- Supports districts' move to digital content
- Offers access to a vetted repository of digital resources for grades K-12 in core subject areas
- Provides search options to easily find content by standard, grade, and subject
- Allows districts to enhance the repository with their licensed digital content
- Delivers a toolset to help districts build their own lessons, units, and courses
- Helps district share curriculum with their entire district or a select number of schools through Google Drive, Thin Common Cartridge, or the Learning.com Platform.

Access High Quality Digital Resources

All of the content in the Curriculum Foundry repository is vetted by a team of Subject Matter Experts (SMEs) with years of classroom and instructional design experience. It includes Open Educational Resources (OER), other dfree digital content, and the district's own premium digital content.

Our experts use Curriculum Matrix from EdGate (one of the nation's most respected data analytics firms, specializing in educational correlations) to select items to vet based on the standards to which they were aligned. The SMEs then review each item selected against a rubric designed by Learning.com, based on rubrics from Achieve.org.

Improve Student Engagement

Curriculum Foundry enables district authors and teachers to work collaboratively to improve student engagement and meet the unique educational needs of each student.

District authors can create digital curriculum tailored to standards and student demographics unique to their district. Teachers can take that a step further, and personalize learning by leveraging the digital content repository to find supplemental content.

Single sign-on allows students to access all of a district's digital curriculum without managing multiple logins.

Achieve Budget Goals

By providing access to vetted Open Educational Resources (OER), other free digital content, and the district's own premium digital content, Curriculum Foundry helps districts reduce their dependence on purchasing print textbooks and other high-cost traditional content.

Curriculum Foundry also makes it easier to incorporate digital content in the classroom without extra costs. It can leverage existing technology within the district (such as Google or an LMS), or a district can use the included Learning.com platform. It does not require additional hardware or administrative staff to maintain. Upgrades and maintenance are included.

Share Content with Teachers and Students

Once districts have created their own curriculum using Curriculum Foundry, it will seamlessly integrate with Google Apps for Education™. Districts will be able to publish curriculum to their Google account, so that students and teachers can access content from Google Drive™.

Curriculum Foundry can also export content via IMS Thin Common Cartridge to compatible Learning Management Systems. If the district does not have an existing LMS, the content can be shared using the Learning.com Platform.

Meeting the Challenge

We listened to what school districts are saying about the transition to digital content, and we created Curriculum Foundry to address those challenges.

Who did we talk to?	What are they saying?	How can Curriculum Foundry Help?
Curriculum Directors	"I need to ensure that all teachers in my district have appropriate and high quality curriculum, aligned to our standards and subjects."	Improve student engagement with district-approved content that can be easily updated as educational goals change from year to year.
Technology Directors	"I need to make digital content more available and easy to use in the classroom. Multiple logins and different locations of content make it difficult for students and teachers to use digital content."	Connects digital content with curriculum building tools. Includes single sign-on to help students easily access digital content from a variety of sources. Helps districts share new digital content using their existing LMS.
Curriculum Authors	"I want a way to create high-quality, standards-aligned learning objects, lessons, units, and courses."	Create engaging content, which can be tagged with a single standard or set of standards, based on the the district author's pedagogical goals.
Teachers	"I need to have access to supplemental content to meet the specific needs of my students."	Helps teachers meet the specific needs of their students with access to a repository of quality digital content that aligns to district standards and instructional goals.

Make Digital Content Work for Your District

Curriculum Foundry provides flexibility in using digital content and helps increase its availability and ease of use in the classroom.
